### VatTex MultiCool -38

#### Description

MultiCool -38 is a universal, silicate-free, organic coolant with a neutral, light-yellow colour. The product is based on monoethylene glycol and softened water. It is supplemented with special, organic additives to achieve the following properties:

- Excellent protection of all metals that are used in modern engines and cooling systems
- Does not affect gaskets and hoses
- Very good resistance to foaming
- Outstanding protection of aluminium cylinder heads

#### Application

MultiCool -38 can be used throughout the year in the cooling systems of modern petrol and diesel engines. The product should be used undiluted and will then provide protection down to -38 °C. The maximum replacement interval is 3 years. Always check the product advice database for the correct application.

#### Specifications

DTRF 29D110

Ford WSS-M97B44-D

MB 326.3

Opel/GM 6277M

VW TL-774F

#### Typicals

Density at 15 °C, kg/l	1,080
Flash Point COC, °C	111

#### Available packagings

50542  
20 L can

50543  
60 L drum

50544  
210 L drum
