Fuel Stabilizer

Description

Fuel Stabilizer is an advanced protection product for the fuel system. If the motorcycle is not used for a month or longer and fuel remains in the tank, there is a risk of the petrol oxidizing. Rubber and paint (dirt) are then deposited in the tank and in important parts of the carburettor. This in turn leads to difficult starting and a rough-running engine. Fuel Stabilizer prevents these problems.

Instructions for use:

- Add the entire contents of 1 bottle to 50 litres of fuel
- Rock the motorcycle backwards and forwards until the fuel and Fuel Stabilizer are well mixed
- Run the engine for a few minutes

Application

Putoline Oil is a high-quality supplier of a wide range of lubricants and maintenance products. We only supply products for motorised two-wheelers and that makes us unique! Our years of experience, combined with continuous research results in the best price/quality ratio. Manufacturing our own products guarantees a consistently high quality. Putoline Oil, Driven by Technology!

Please refer to the advisory database for use of the correct product.
