Putoline Metal Proof & Protect

Description

Metal Proof & Protect is a high-quality (winter) anti-corrosion protection product produced with high-quality waxes and special additives. Metal Proof & Protect effectively protects untreated and lacquered metal parts against corrosion caused among other things by moisture and brine. Suitable for road and off-road motorcycles.

Application

Metal Proof & Protect must be well shaken before use. Surface must be dry, clean and grease-free. Spray an even layer on the surface to be protected and allow the protective layer to dry (dust dry after approx. 2 hours). Do not spray the product on brake discs, (hot) exhaust, and/or engine parts. Metal Proof & Protect can be removed easily with a cold degreaser if necessary.
